

EXPERIMENT-1Cloud Based Mark sheet processing system.Aim:

To create a simple Cloud Based Mark sheet processing system using a cloud Service provider to demonstrate (SaaS).

Objective : Requirements :

- ⇒ Total ⇒ Computer / Laptop
 ⇒ Internet connection
 ⇒ Web browser
 ⇒ HTML, CSS, JSS
 ⇒ Firebase cloud service.

Fields:procedure :

1. Create a web app
2. Create a form to enter student name & register no.

3. Enter marks for different subjects.
4. Calculate total marks.
5. Calculate the average & percentage.
6. Calculate the overall performance.
7. Store the student details in cloud.

Total marks } = Sum of all subject marks

Avg : Total marks / NO. of subjects.

percentage = (Total marks) / (Max mark) $\times 100$.

Input:

Vijay

101

80

90

85

75

70

output:

Vijay

101

400

80

80%.

very good.

Result:

Thus, Cloud Based Mark sheet processing system was successfully created & deployed using a cloud service, demonstrating SaaS.

EXPERIMENT-2

Cloud Based property Buying & Rental System.

Aim:

To create a simple cloud-based property Buying & rental system for Chennai city using a cloud service provider to demonstrate SaaS.

Requirements

- ⇒ Computer / Laptop
- ⇒ Internet Connection
- ⇒ Web browser
- ⇒ Firebase

Fields:

Procedure:

1. Create a web application.
2. Create a form to enter property fields.
3. Enter the property type & location.
4. Select Buy & rent
5. Select Residential / Commercial
6. Enter area & property value.

EXPERIMENT-2

Cloud Based property Buying & Rental System.

Aim:

To create a simple cloud-based property buying & rental system for Chennai city using a cloud service provider to demonstrate SaaS.

Requirements

- ⇒ Computer / Laptop
- ⇒ Internet Connection
- ⇒ Web browser
- ⇒ Firebase

Fields:

Procedure:

1. Create a web application.
2. Create a form to enter property fields.
3. Enter the property type & location.
4. Select Buy & rent
5. Select residential / Commercial
6. Enter area & property value.

7. Enter rental agreement detail
8. Store the property information in the cloud.
9. display available properties
10. Test the app.

Input:

P101
Flat
Rent
residence
1200 Sq.ft
Chennai
₹ 20 000/month
₹ 60 00 000

Output

P101
Apartment
Chennai
1200 Sq.ft
Available
₹ 20,000/month

Result:

Thus, the cloud-Based property buying & rental system was successfully created & deployed using a cloud service, demonstrating

EXPERIMENT - 3

Creation of Virtual Machine Type - 2 Hypervisor.

Aim :

To demonstrate Virtualization by installing a Type 2 hypervisor and creating a VM.

Requirements :

- ⇒ Computer .
- ⇒ Window .
- ⇒ Oracle .
- ⇒ Windows .

Procedure :

1. Download the Oracle VirtualBox.
2. Open Oracle Virtual Box .
3. Click New to create a virtual machine.
4. Enter the name of the virtual machine.
5. Select the required OS.
6. Allocate 5 CPU's to VM .
7. Allocate 12 GB RAM .
8. Create a virtual hard disk of 80 GB.

Configuration :

Marksheet VM

5 CPUs

12 GB

8 GB

Oracle Virtual Box.

Windows / Linux.

Result:

Thus, a virtual machine with 5 CPU, 12 GB ram & 8 GB storage was successfully

Experiment - 4.

Snapshot & Restoration of virtual machine:

Aim:

to create a Snapshot of a Virtual machine and restore the previous version of the virtual machine.

Requirements

↳ Oracle Virtual Box

↳ previously Created Virtual machine.

procedure:

1. open Virtual Box.
2. Select the previously created virtual machine.
3. Start the virtual machine.
4. Make some changes to the VM.
5. Shut down the VM.
6. Click take Snapshot.
8. Enter a suitable snapshot name such as Initial state.

9. Start the VM
10. make some additional changes.
11. Shutdown VM

Eg:

Result:

Thus, a snapshot of the virtual machine was successfully created & the previous version was restored successfully using Oracle Virtual Box.
